ABOUT ME

Software developer with experience developing enterprise web applications using Laravel, ASP.NET Core, PHP, C#, Oracle, and MySQL. Experienced in designing RESTful APIs, automating business processes, and developing data-driven solutions for financial reporting systems. Passionate about writing clean, debugging, maintainable code, solving complex technical problems, and continuously learning modern software developer practices like AI integration.

WORK EXPERIENCE

HPCS SDN. BHD.

2025 - Present

Software Developer

- Currently contributing to the development of the Sistem Pengurusan Fatwa, an enterprise web application built with the Laravel framework.
- Developed and maintained modules for the Indah Water Konsortium (IWK) Billing System using ASP.NET Core (C#) and React.
- Developed an internal Laravel application to automate financial report comparison by processing and validating uploaded Excel reports.
- Designed and implemented background job pipelines for end-of-month financial data processing using PHP
- Developed RESTful APIs and integrated Oracle Database to support enterprise business applications.
- Collaborated with system analysts and cross-functional team members to implement business requirements and deliver new application features.
- Participated in debugging, testing, and maintaining production systems to ensure application reliability and performance.

EDUCATION

Universiti Teknologi MARA (UiTM), Shah Alam

2023 - 2025

Bachelor of Computer Science (Hons.) Netcentric Computing
CGPA: 3.00

Universiti Teknologi MARA (UiTM), Kelantan Branch

2020 - 2023

Diploma in Computer Science
CGPA: 3.30

SELECTED PROJECTS

Indah Water Konsortium (IWK) Billing System

- Developed and maintained enterprise billing system modules using ASP.NET Core (C#) and React.
- Implemented backend business logic and integrated Oracle database operations to support business requirements.
- Collaborated with system analysts and developers to deliver new features, enhancements, and production fixes.
- Participated in system testing, debugging, and ongoing application maintenance.

End-of-Month Data Processing Pipeline

- Designed and implemented a background job pipeline to automate end-of-month financial data processing and reduce 50% of completion time.

Financial Report Comparison Tool (Internal)

- Developed an internal web application to automate the comparison of monthly financial reports between enterprise systems.
- Implemented Excel import, data normalization, and comparison logic to identify discrepancies across financial datasets.
- Generated comparison reports highlighting data differences, reducing manual verification efforts.
- Designed the application using Laravel MVC architecture with database-driven processing.

TECHNICALS SKILLS

Programming Languages

- PHP, C#, SQL, Java, Python, JavaScript

Frameworks & Libraries

- Laravel, ASP.NET Core, React

Databases

- Oracle Database, MySQL, Firebase

DevOps & Infrastructure

- Docker, Nginx, Linux, Laragon

Tools

- Git, GitLab, GitHub, Postman, Visual Studio Code, Visual Studio, Android Studio
